

”Far cheaper and more room for tools. An easy choice!”

As Christoffer Juul Pedersen were looking at a larger investment in mobile hand hygiene solutions for the 35 floor layers in Vesla Gulve A/S – until he discovered ShoulderSink.

Seamless flooring solutions – and Health and Safety

Vesla Gulve A/S renovates and coats existing floors as well as in new developments, ensuring longevity and durability. The floors are adapted to the needs of the customer; design, hygiene, durability, chemical and temperature resistance, conductivity, anti-slip etc.

As one of the leading suppliers of flooring solutions, based on epoxy, polyurethane and mortar, the focus is on Quality – but also on meeting the Health and Safety requirements that comes with using Epoxy and Polyurethane.

Water and Soap

One of the requirements is access to water and soap. “We were looking at some quite expensive solutions, as we came across ShoulderSink” department manager Christoffer Jull Pedersen explains, “but the best part was actually that it was so compact – everything is integrated, even a bin. That leaves more room for our professional tools. That part was pretty well received amongst our floor layers.”

”Even water and the best soap, cannot always remove the chemicals we use. But a real handwash is really welcome before lunch, after using a wipe containing both chemicals and abrasives” He continues. “Load it with hot water in the morning – and it stays lukewarm and pleasant throughout the day. The down side is that you need to remember filling the water tank – but that was equal for all the expensive alternatives we were looking at” Christoffer Juul Pedersen finishes off with a smile.

All of Vesla Gulve A/S’ Vans and Trucks are today equipped with a ShoulderSink
